

ENVIRONMENTAL CONSIDERATIONS

The proposed facilities were evaluated in terms of potential radiofrequency exposure at ground level in accordance with OST Bulletin NO. 65, "Evaluating Compliance With FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation." For the total of horizontally polarized and vertically polarized power, 25 kilowatts, and a 6 element FM transmitting antenna, the "worst case" radiofrequency field exposure in the vicinity of the tower is well below the ANSI C-95 guidelines since the center of radiation of the proposed antenna will be approximately 90 meters above ground level. Furthermore, the applicant will reduce power or terminate transmitter operation when necessary, to protect workers on the tower in the vicinity of the antenna so that the radiofrequency exposure does not exceed the guidelines in the aforementioned OST Bulletin. The applicant will ensure that radiofrequency warning signs are posted at the tower. The proposed transmitting system will comply with the ANSI guidelines since it satisfies the criteria set forth in OST Bulletin No. 65.

Thus, it is demonstrated that the applicant complies with the Commission's Rules regarding human exposure to RF radiation. This proposal therefore may be categorically excluded from environmental processing under Section 1.1306 of the FCC Rules.

The site is not in an area listed in Section 1.1307(a) (1)-(7) of the Rules as significant from an environmental standpoint. The tower does not employ high intensity lighting and none is proposed. The proposal is therefore categorically excluded from environmental processing as outlined in Section 1.1306 of the Commission's Rules.
